

Git

Thursday, February 08, 2024 8:47 AM

If you want create a new branch from any of the existing branches in Git, just follow the options.

First change/checkout into the branch from where you want to create a new branch. For example, if you have the following branches like:

- **master**
- **dev**
- **branch1**

So if you want to create a new branch called "**subbranch_of_b1**" under the branch named "**branch1**" follow the steps:

1. Checkout or change into "**branch1**"
`git checkout branch1`
2. Now create your new branch called "**subbranch_of_b1**" under the "**branch1**" using the following command.
`git checkout -b subbranch_of_b1 branch1`

The above will create a new branch called **subbranch_of_b1** under the branch **branch1** (note that **branch1** in the above command isn't mandatory since the HEAD is currently pointing to it, you can precise it if you are on a different branch though).

3. Now after working with the **subbranch_of_b1** you can commit and push or merge it locally or remotely.

Create a branch from another branch

***MASTER**

Create a branch called dev from Master branch

```
$ git checkout master
(change to master branch)
```

```
$ git checkout -b dev master
(create a branch called dev from master)
```

4.

```
$ git checkout dev
(switch to dev branch)
```

```
$ git checkout -b branch1 dev
(create a branch called branch1 from dev branch)
```

***MASTER**

dev

branch1

Push the **subbranch_of_b1** to remote:

```
git push origin subbranch_of_b1
```

5. Press 'Q' to exit from git show command
6. Git status
7. Git add .
8. Git commit -m ""
9. Git push

10. Git branch
`git push <remote_name> <source_branch>:<destination_branch>`

Eg: `git push origin feature-branch:main`

11. `git push -u origin new-branch-name`

-> to push new branch to remote if that branch is not exists in remote.

11. `git remote set-url origin https://dev.azure.com/{organization}/{project}/\_git/{repository}` ==>
command to change the URL of the remote repository

11. `git remote -v` ==> Check the remote URL:
